Fun

Easy

Quick

Trendy

Affordable

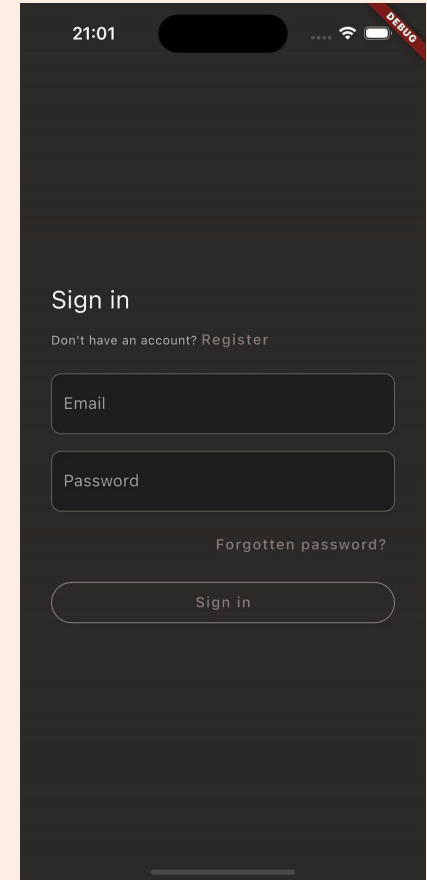

# Module: Login

**Purpose:** A log-in/sign-in screen with multiple options (gif example contains email and password)

**General Structure:** A selection between email+password or phone number + text

## Key features:

- Choose between Email+password and Phone number + OTP
- “Forgot Password” button the allows changing password with email
- Verification email to new sign-ins using email

# Module: Home Page

**Purpose:** The first thing every user sees when he enters the app, contains the most relevant / interesting items we have to offer

**General Structure:** The page contains two horizontal scroll bars for rapid view of items

## Tab: Recommended For You

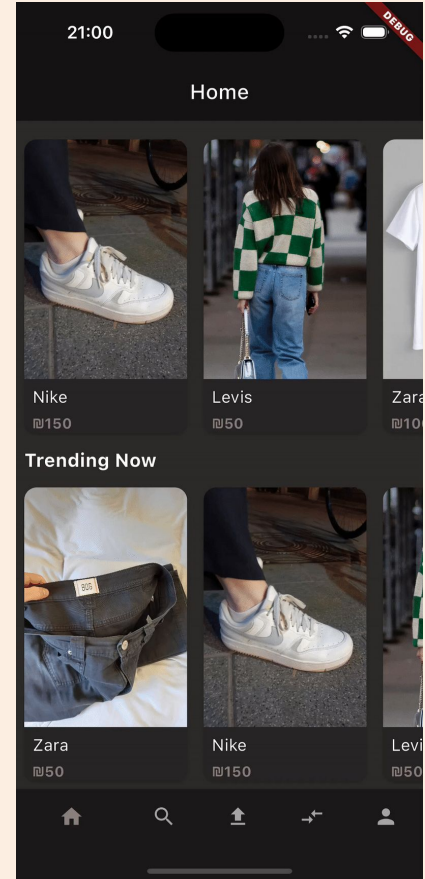

Our recommended items for this specific user

Recommended = Fit the user's size + Fit earlier searches / interests

## Tab: Trending Now

Items that are:

- Low priced compared to our pricing
- Fit to frequently searched criteria over all users
- Seen a lot / shared a lot / liked a lot (future additions)

# Module: Explore

**Purpose:** Allows user to easily find his need

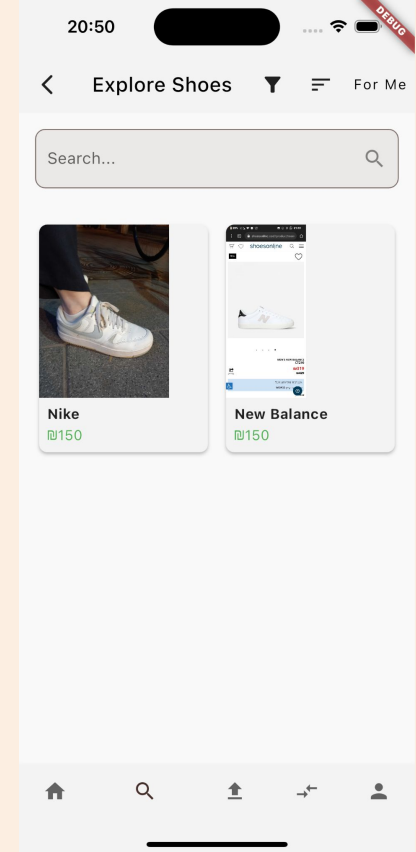

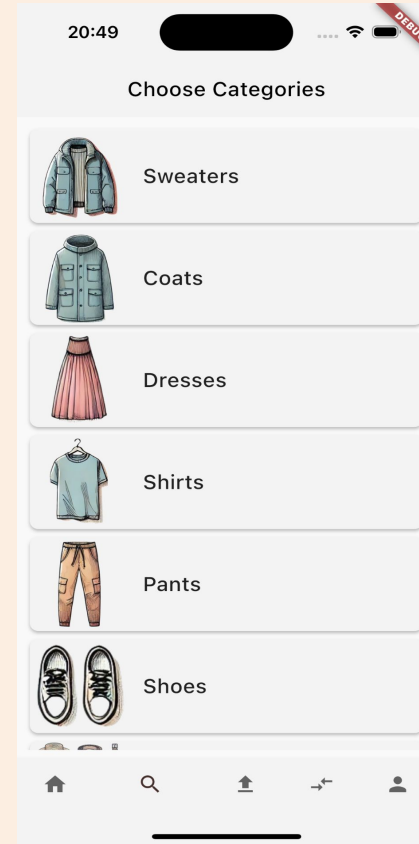

**General Structure:** Contains one page for main categories and a second page with all the filter and exploration features

## Categories Page

Contain a list of categories with attractive logos so the user can easily start exploring without getting results too broad

## Explore page

- Easy access button on the top right for: filter module, sorting dropdown and the quick “for me” button that filter for the user sizes
- Search bar to easily search for a specific product / brand
- Infinite-scroll feature that keeps the user engaged for longer

# Module: Filter

**Purpose:** Allows both to easily find a specific item and to just quickly filter the results

**General Structure:** All relevant criteria one after the other with a multiple choice and a autocomplete when relevant, also contains a price smart filtering for max+min price together

## Auto Complete

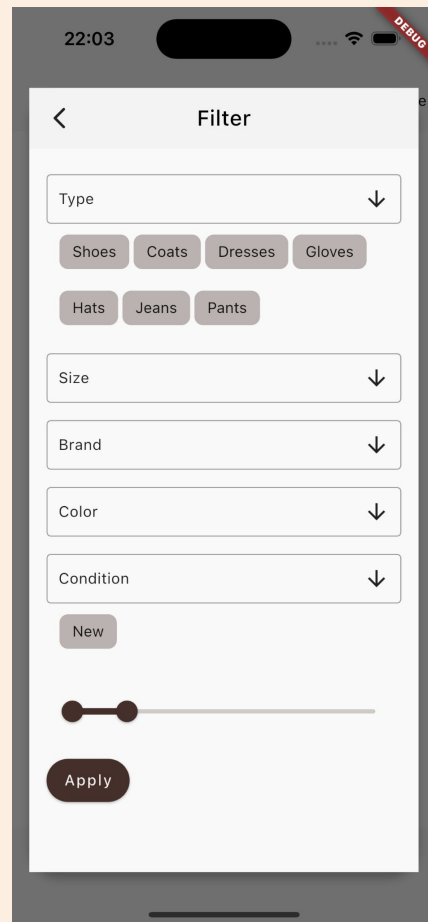

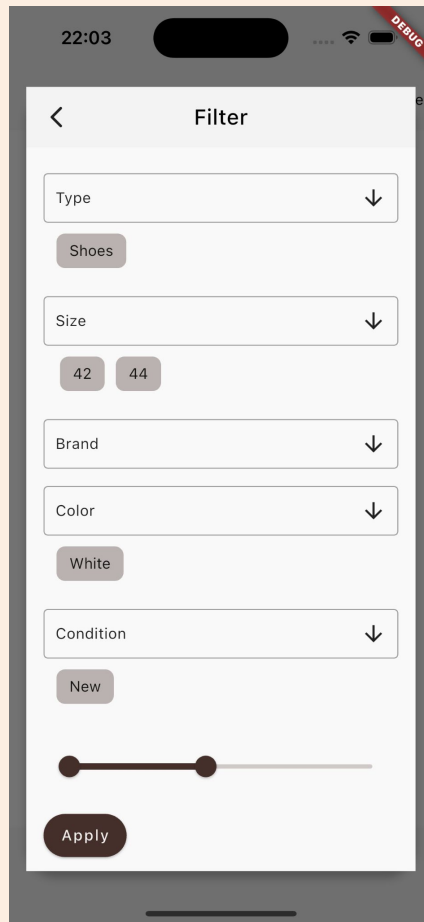

Where the autocomplete is relevant we allow the user to write the name to quickly find it.

## Multiple Choice

Allows user to make a little broader search instead of a too specific one.

## Price Range

Easily set a Min and Max price for any price range

# Module: Upload Item

**Purpose:** Quickly upload an item to the app with minimum manual work required

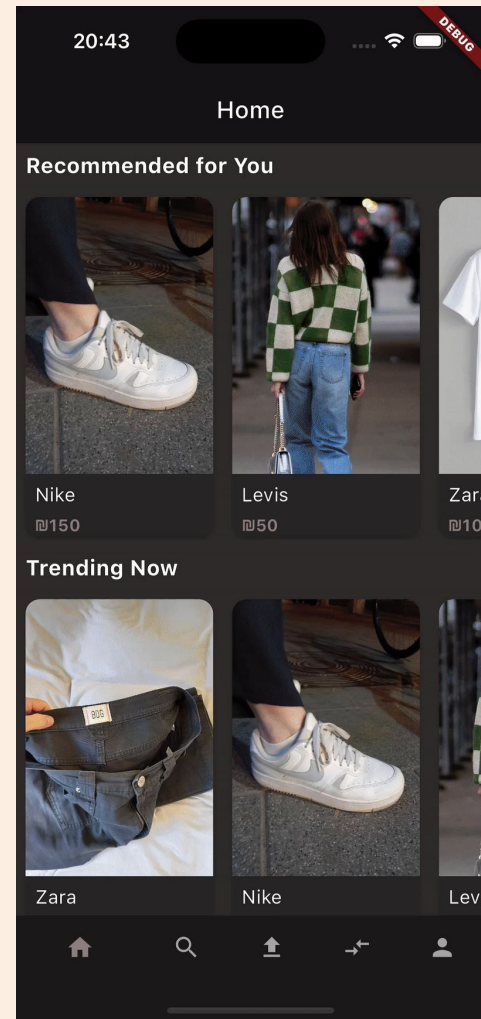

**General Structure:** Two step procedure: First the user uploads all the images of the item, Second he fills all the missing item's metadata.

## AI auto tagging

Photos are sent to an AI that auto tags them for easy upload.

## Price range indicator

After the user click submit the system analysis the item's price according to it's metadata, if the price is way above the estimated price a popup is shown alerting the user about the high price and suggests to lower it - not mandatory, just an alert.

# Module: Order Management Page

**Purpose:** Allow the user to manage his orders, incoming and ongoing altogether

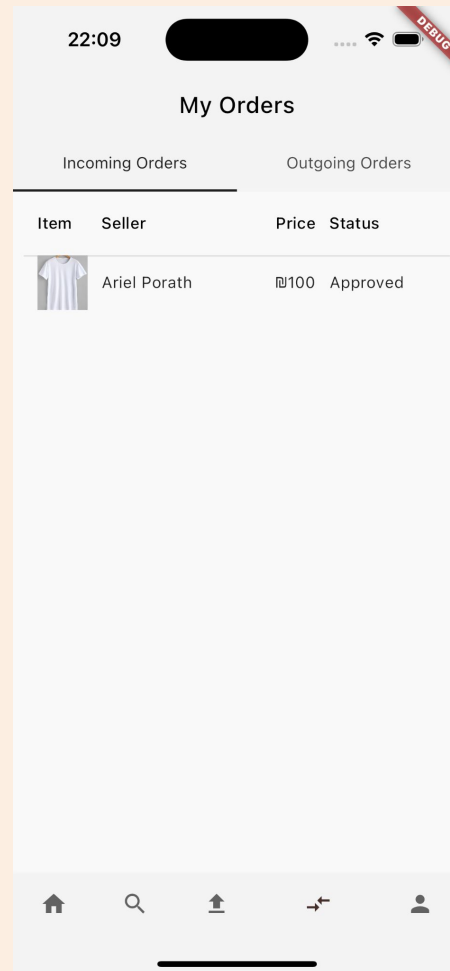

**General Structure:** Two tabs that contains tables, each table shows the orders in this section.

## Outgoing Orders (Sold)

Allows the user to update the order status (approved or declined or shipped if this was an option) after the item was bought.

## Incoming Orders (Buy)

Show your order status and contact that you bought the item from.

# Module: profile

**Purpose:** The profile of the user, allows users to get familiar with the people they buy from

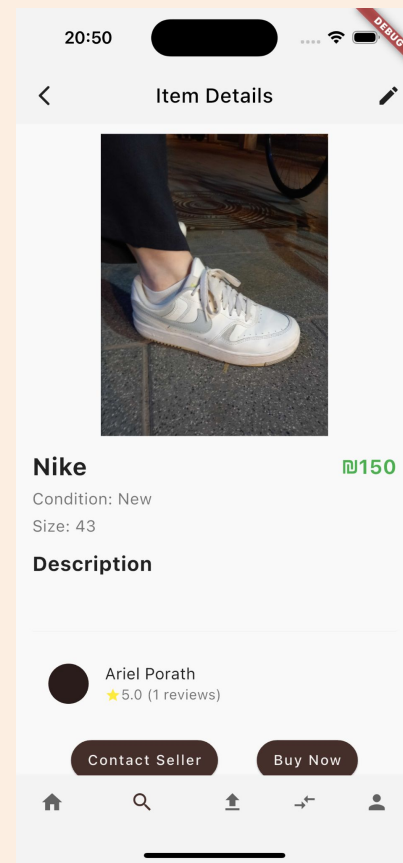

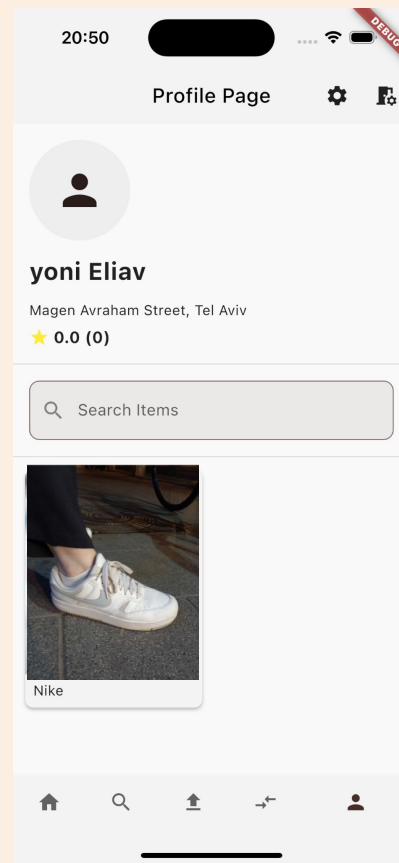

**General Structure:** Contains seller image with general information, rating with reviews and an items section for all the sellers items

## Rating

Clicking on the rating button pops up the reviews the user's got from other buyers and build credibility

## Items section

View the other items the user has to offer, we believe that if one item can suit the user than there is a bigger chance of him buying more items from this seller again

# Module: settings and preferences

**Purpose:** Allows the user to customize his app and provide essential information

**General Structure:** clickable sections with valuable data or toggles, crucial for the user's experience

## Dark mode, language and notification settings

Easy access button that allows the user to switch languages and change the app theme

## Size Preferences

Allows users to select their size per clothing type, later this data is used in the recommendation system and the “For me” feature

## Account information

Allows users to modify their account information and passwords
